Q4

Are there other plans or programmes that should be identified and reviewed as part of the Strategic Environmental Assessment process?

Animal welfare, proper land management to provide food to fed the world

Q5

Is there additional information that needs to be considered as part of the baseline data? If so, please enter in the text box below.

Care of animals, underutilisation of farmland

Q6

Do you consider that the range of issues covered is appropriate?

No,
If the answer above is "No" please comment:
There must be a global programme to ensure the future of the planet

Q7

Are there any changes, that in your consideration should be made a) to the proposed environmental objectives and b) to the guide questions including the consideration of alternatives?

the proposed environment objectives are rubbish. The answer is simple -go back to farming in our parents and grand parents time.

Q8

Do you have further suggestions regarding the scope of the Strategic Environmental Assessment and its proposed assessment of the CAP Strategic Plan?

Get the suits and "academics" a shovel and fork and send them out on the land. In a matter of weeks they will realise the problems and see the answers and then get the advice from their peers.

NA

Page 4: Responses

Q4

Are there other plans or programmes that should be identified and reviewed as part of the Strategic Environmental Assessment process?

Yes, there should be a move towards plant based farming for a number of reasons which could be summarised as: animal rights, lower water usage, higher yield per acre, a regenerative process and a lower carbon footprint. The CAP plan must align towards Ireland's and the EU's 2050 carbon netural mission - a farming system heavily based on animal agriculture will render all other efforts useless. Thus, all supports to farmers should promote plant based agriculure which is better for the planet, the environment, workers, animals and society

Q5

Is there additional information that needs to be considered as part of the baseline data? If so, please enter in the text box below.

Yes - emissions and animal rights. We cannot continue to sweep the animal agriculture under the carpet as we are unwilling to change. We must use these CAP supports to reward and incentivie positive actions - it should not be used for a "business as usual" approach which rewards animal rights violations and damage to the environment/society via high carbon outputs.

Q6

Do you consider that the range of issues covered is appropriate?

No,

If the answer above is "No" please comment:
Animals rights must be considered. During a time of oppression/injustice we must view issues through the eyes of the victims - the billions of land animals which are bred into production and killed against their will.

Q7

Are there any changes, that in your consideration should be made a) to the proposed environmental objectives and b) to the guide questions including the consideration of alternatives?

Targets and guidelines are not stringent enough and come across as a box ticking exercise. Climate action is about societal survival; not ticking a box on a piece of paper. To correctly align ourselves with our climate targets, we must phase out animal agriculture. Anything less would be a half measure and negatively impact the future generation to come. I repeat, climate action is not a box ticking exercise, it is about the survival of our population and future generations. Act Now.

Q8

Do you have further suggestions regarding the scope of the Strategic Environmental Assessment and its proposed assessment of the CAP Strategic Plan?

Please consider animals rights. The piece of meat that we call food was once an animal that lived, did not want to die and was killed against it's will. We must end all subsidies which reward the deliberate breeding and unjust killing of these being.

Q4

Are there other plans or programmes that should be identified and reviewed as part of the Strategic Environmental Assessment process?

Several other plans and programmes are set out in sub-sections 2.3-2.5 and Annex A. However, rather than listing the relevant EU and national legislation and accompanying plans and programmes a hierarchy and prioritisation of these policies is needed. This is necessary for the SEA to assess the relationship of key environmental and climate policies against the objectives set out in the CAP Strategic Plan (CSP) in an effective and targeted way. Under sub-sections 2.3 and 2.4 the Appropriate Assessment for the Habitats Directive and Water Framework Directive (WFD) are singled out over other policies, but without any rationale given. While these Directives are key pieces of environmental legislation relevant to the agri-food-sector, the SEA should also be grounded on the headline objectives and targets set out in the European Green Deal as well as other EU and national environmental and climate objectives. Notably, the proposed CSP regulation (COM/2018/392 final) sets out key pieces of EU environmental and climate legislation under Annex XI (which have statutory national plans*) that the CSP is expected to make an active contribution to over the next decade. This includes: • Birds Directive (2009/147/EC) • Habitats Directive (92/43/EEC) • WFD Directive (2000/60/EC) • Nitrates Directive (91/676/EEC) • Air Quality Directive (2008/50/EC) • National Emission Ceilings Directive (2016/2284) • GHG emissions and removals from land use, land use change and forestry (LULUCF) Regulation (EU/2018/841) • GHG reductions 2021 to 2030 Effort Sharing Regulation – ESR (EU/2018/842) • Renewable Energy Use Directive (2009/28/EC) • Governance of the Energy Union Regulation (EU/2018/1999) • Sustainable Pesticide Use Directive - SPUD (2009/128/EC). All plans and programmes should be carefully considered alongside key EU environmental and climate objectives in terms of their relevance to the agri-food sector. For example, Annex A highlights the Relationship to Plans and Programmes, however, the accompanying summaries remain generic and do not specify the objectives and scope of these programmes as they pertain to the agri-food sector. The scoping of the SEA should also make clear the relationships between key pieces of EU legislation outlined above (e.g., WFD, SPUD, Birds and Habitats Directives) and statutory national plans* as well as relevant international commitments (e.g., Convention on Biological Diversity, Paris Agreement). *refers to statutory national plans e.g., the River Basin Management Plan 2022-2027, the SPUD National Action Plan 2019-2024 and Prioritised Action Framework for Natura 2000 2021-2027. Other key supporting plans and programmes relevant to EU legislation and international commitments include the Ag Climatise Roadmap and the National Biodiversity Action Plan for 2017-2021 and its successor.

Q5

Is there additional information that needs to be considered as part of the baseline data? If so, please enter in the text box below.

Several strategic documents, assessments and data sets are outlined in Section 4 of the scoping report. However, the selection lacks precision in terms of how it pertains directly to the draft CAP Strategic Plan (CSP) e.g., the SWOT analysis, Needs Assessment and Interventions for consideration. For example, the scoping report draws on the findings of EPA's recent SOER "Ireland's Environment: An integrated Assessment 2020". However, the direct relevance of its key findings to the CSP is vague and does not appear to refer to the specifics of the working draft of the CSP. The scoping report needs to set out how specific national indicators will inform the baseline data with a clear link made to the CAP's new Performance Monitoring and Evaluation Framework (PMEF) and national monitoring systems. This also includes identifying where data gaps exist and how these can be addressed through for instance the use of proxy indicators. Key indicators for the SEA for example concern biodiversity, soil, water etc, but also issues such as farming practices e.g., area under organic farming, farming intensity and farmland type/designations e.g., HNV farmland, SACs/SPAs and health e.g., antimicrobials sales in food-producing animals, risk and impacts of pesticides. Overall baseline data should be guided by the national reference values for the quantified Green Deal targets set out in the European Commission's CSP Recommendations to Member States (Annexes 1 & 2 COM(2020) 846 final) This includes indicators related to the key European Green Deal targets for the agri-food sector: • 25% of the EU's agricultural land under organic farming • 50% reduction of the overall use and risk of chemical pesticides and use of hazardous pesticides • 50% reduction of sales of antimicrobials for farmed animals and in aquaculture • 10% of the agricultural area under high-diversity landscape features • 50% reduction of nutrient losses, while ensuring no deterioration in soil fertility • 20% reduction in the use of fertilisers by 2030 • Contribution to the 55% GHG emissions reduction target by 2030 and to reach climate neutrality by 2050. For example, the SEA should account for the current area of Irish farmland under organic production and the proposed target to 2030 in the Ag Climatise Roadmap (Action 9) vis-à-vis the current EU share for organic farmland and the 25% EGD target.

Q6

Do you consider that the range of issues covered is appropriate?

No,

If the answer above is "No" please comment:
A wide range of issues are highlighted reflecting the different environmental and climate challenges facing the agri-food sector. However, the framework and approach for how these issues will be tackled is not immediately apparent to the reader (see answer to Question 8 as well).

Q7

Are there any changes, that in your consideration should be made a) to the proposed environmental objectives and b) to the guide questions including the consideration of alternatives?

a) Table 5 in sub-section 5.2 proposes a series of draft SEA objectives to test the potential environmental effects of the draft CAP Strategic Plan (CSP). It is mentioned that these have been taken from national plans and the recent SEA Scoping of the Agri Food Strategy 2030. However, the relationship between the SEA objectives and key EU environmental legislation and national plans relevant to the agri-food sector, including the European Green Deal (EGD) targets, is not explained. SEA objectives need to be formulated against EU and national objectives and targets relevant to the agri-food sector in a transparent and result-orientated way, against which the CSP's impacts can be tested. The overall aim of the SEA should be to ensure the full integration of environmental considerations into the CSP to ensure a high level of environmental performance and the promotion of the sustainable development of the agri-food sector to 2030. To this end, the SEA must help to support coherence between all 10 CSP operational objectives and sub-objectives (9 CAP specific objectives and the cross-cutting objective) and EU environmental and climate objectives/EGD targets from design through to implementation. This should essentially identify where the relationship could be neutral, complementary or conflictual to improve synergies, manage potential trade-offs and identify where mitigation actions are needed. b) Sub-section 5.4 appears to draw to some extent from the EPA's guidance on "Developing and Assessing Alternatives in Strategic Environmental Assessment" (2015). We would expect that each alternative would be framed by the 10 objectives and sub-objectives set out in the draft CSP. This should also draw on Ireland's existing national targets that correspond to the EGD targets. The scoping report should already set out to some extent the different alternatives that will be comparatively assessed (including a baseline scenario) and clarify how they will be framed drawing on the EPA's current guidance. It should also be explained why these alternatives have been chosen as well as their potential limitations.

Q8

Do you have further suggestions regarding the scope of the Strategic Environmental Assessment and its proposed assessment of the CAP Strategic Plan?

Overall, the scoping report should set out clearly how the SEA will be carried out including an overview of the process, the methodological approach and how stakeholders will be involved. The SEA objectives must be further refined and accompanied by the relevant targets and indicators to support the design of the CAP Strategic Plan (CSP) and monitoring during implementation. As well as the draft CSP, greater emphasis needs to be placed on the European Commission's Recommendations for the Irish CSP published in December 2020 (SWD(2020) 377 final). (For further reflections on the European Green Deal targets see the answer to Question 5). Reference is made to the use of the recent SEA Scoping of the Agri Food Strategy 2030 (DAFM, 2020) to inform the understanding of existing environmental issues in the CAP SEA. However, the SEA for the CSP needs to have a more structured and transparent overview of the relationship and specific overlaps between the forthcoming Agri Food Strategy 2030 and the CSP. This includes the identification of the mitigating actions that may need to be put in place to ensure environmental performance and the promotion of sustainable development across the agri-food sector. This is necessary because the Agri Food Strategy 2030 is expected to be a major driver of public policy commitments and private sector initiatives towards the agri-food sector over the next decade. In particular, it could have a significant positive or negative impact on Ireland's environmental and climate performance. Some final observations include: In sub-section 1.4, "Table 1 CAP Interventions in National Strategic Plans" under "Rural Development Interventions" reference should be made to support for organic farming under "Environmental, climate and other management commitments" (i.e., under "Agri-environmental schemes" add "and support for organic production"]. In sub-section 3.3 "Table 2 Strategic Environmental Assessment Topics – scoping and potential significant environmental effects" refers to an "Increase in ecological farming practices" under the SEA Topics covering "Biodiversity Flora and Fauna" and "Climatic Factors (Climate Change & Air Quality)". As this definition is unclear it would be more appropriate to refer to organic farming as it is legally defined at EU level. It should be referenced under "positive potential effects" under these SEA Topics as well others e.g., water resources, population and human health, soil and geology, ecosystem services/ and natural capital. The "positive potential effects" of "appropriate agro forestry" should also be considered, under other SEA Topics too e.g., soil and geology, ecosystem services/ and natural capital. In Section 2, both the Marine Framework and the Sustainable Pesticide Use Directive (and statutory national plans and programmes) should be referenced.

Page 4: Responses

Q4

Are there other plans or programmes that should be identified and reviewed as part of the Strategic Environmental Assessment process?

The need to transition away from animal agriculture, to plant-based, sustainable farming practices.

Q5

Is there additional information that needs to be considered as part of the baseline data? If so, please enter in the text box below.

As above.

Q6

Do you consider that the range of issues covered is appropriate?

No,
If the answer above is "No" please comment:
There needs to be a wider review on the devastating effects of animal agriculture, in terms of climate change, environment, animal rights and human rights.

Q7

Are there any changes, that in your consideration should be made a) to the proposed environmental objectives and b) to the guide questions including the consideration of alternatives?

Animal agriculture should be completely eliminated.

Q8

Do you have further suggestions regarding the scope of the Strategic Environmental Assessment and its proposed assessment of the CAP Strategic Plan?

As above.

How Do You Best Describe Yourself

Member of the public

Q2

What is your age profile

41-55

Q3

Organisation if applicable

Respondent skipped this question

Page 4: Responses

Q4

Are there other plans or programmes that should be identified and reviewed as part of the Strategic Environmental Assessment process?

Respondent skipped this question

Q5

Is there additional information that needs to be considered as part of the baseline data? If so, please enter in the text box below.

The lack of baseline data on the quality of habitats on all farmland needs to be considered (not just farms in designated sites). Baseline data is needed for the success or failure of any intervention on biodiversity to be judged.

Q6

Do you consider that the range of issues covered is appropriate?

Yes

Q7

Are there any changes, that in your consideration should be made a) to the proposed environmental objectives and b) to the guide questions including the consideration of alternatives?

On page 33 of the Scoping Report, Table 5 Draft Strategic Environmental Objectives and subheadings, under Biodiversity, Flora and Fauna: Will the draft CAP Strategic Plan 2023-2027 resolve the issue of ongoing habitat loss on ALL farmland (not just habitats in designated sites)? To resolve this issue requires a critical examination of the fundamentals of how agricultural supports are organised. As stated in the EPA report 'Ireland's Environment An Integrated Assessment 2020' page 153 'Current implementation of the Basic Payment Scheme means that farmers receive no payment for land that is 'unworked', such as scrub and wetlands, which are naturally biodiverse habitats. This incentivises the clearance of such habitats to make them suitable for agriculture, in direct opposition to the environmental incentives within the CAP and GLAS. … It is important that this imbalance is addressed in the post-2020 CAP to protect farmland habitats.'

Q8

Do you have further suggestions regarding the scope of the Strategic Environmental Assessment and its proposed assessment of the CAP Strategic Plan?

The Scoping Report is well set out. However, the SEA process must genuinely shape the outcome of the Strategic Plan. The TV ads telling us about Ireland being a sustainable food producer ring hollow when environmental indicators are assessed objectively. Here are some telling quotations from the EPA report 'Ireland's Environment An Integrated Assessment 2020': Page 347: Biodiversity is also under pressure from land use changes and intensive farming. Ireland's reputation as a food producer with a low environmental footprint is at risk of being irreversibly damaged. Outcome-focused and activity metrics are required to allow for tracking of the sector's performance and accountability in improving sustainability and protecting the environment. Economic growth in the agri-food sector in recent years is happening at the expense of the environment, as evidenced by trends in water quality, emissions and biodiversity all going in the wrong direction. Business-as-usual scenarios will not reverse these trends. Page 397: The main drivers of these declines are agricultural practices, which are negatively affecting over 70 per cent of habitats, particularly ecologically unsuitable grazing, abandonment, pollution, drainage and reclamation practices. Page 398: A recent audit by the European Court of Auditors examined the contribution of the Common Agricultural Policy (CAP) to maintaining and enhancing biodiversity. … It recommended that the Commission improves the design of its next biodiversity strategy, enhances the contribution made to biodiversity by direct payments and rural development action, tracks biodiversity-related expenditure more accurately and develops reliable indicators that are suited to monitoring progress in farmland biodiversity. Page 440: It is not only protected areas that are at risk. Local impacts are evident too. For example, the excessive cutting of hedgerows, the overuse of herbicides and the infilling of small wetlands place multiple pressures on local environments. Page 444: The core principle of Food Wise 2025 was that 'environmental protection and economic competitiveness are equal and complementary: one will not be achieved at the expense of the other' (DAFM, 2015). While the Food Wise 2025 strategy has delivered the intensification and growth that it promised, the pressures on the natural environment have increased, with as a consequence trends in water quality, GHG emissions, ammonia and biodiversity all going in the wrong direction. Measurable, reportable and verifiable data and evidence are needed to demonstrate that the agriculture sector is playing its part in reversing negative trends and making lasting environmental improvements.

Q1

How Do You Best Describe Yourself

Agricultural Advisor,
Other (please specify):
Representative Body

Q2

What is your age profile

41-55

Q3

Organisation if applicable

Agricultural Consultants Association (ACA)

Page 4: Responses

Q4

Are there other plans or programmes that should be identified and reviewed as part of the Strategic Environmental Assessment process?

Yes - conduct an evaluation to ensure the most important influencers in farmers behaviours i.e. the farm consultant/advisor are included in any proposed strategy

Q5

Is there additional information that needs to be considered as part of the baseline data? If so, please enter in the text box below.

No

Q6

Do you consider that the range of issues covered is appropriate?

Yes

Q7

Are there any changes, that in your consideration should be made a) to the proposed environmental objectives and b) to the guide questions including the consideration of alternatives?

ACA support all that are included. In order to meet our sectoral targets there needs to be an inclusion on incentives to assist farmers to adapt their farming methods

---

Q8

Do you have further suggestions regarding the scope of the Strategic Environmental Assessment and its proposed assessment of the CAP Strategic Plan?

ACA recognises the need for behavioural changes and farm practices in Irish farmers to ensure the implementation of government policy and our Climate Change objectives. The private farm advisory service has a unique relationship with their farmer clients and for many customers that relationship can exceed 30 years. The farm consultant/advisor is the best placed person to discuss, encourage and show the benefits of behavioural and management changes to farmers. A National Whole Farm Approach/Baseline Evaluations Programme must commence immediately to protect our national interests and our agricultural sector. Without one we are exposed to significant challenges and potential cuts, which will ultimately affect our farmers and threaten both them and future generations. It is the view of ACA that our members must be included in a structured policy system to ensure our 55,000 farmer clients are incorporated into all policies. Over 40% of the market cannot be excluded and this will only lead to detrimental effects on the agricultural sector and the Irish economy. Our contribution to the Agricultural Industry (which is at no cost to the state) and our future role in the implementation of the Common Agriculture Policy post 2023, EU Climate Change Policy to be carbon neutral by 2050, the Irish governments Climate Action Plan and other sectoral policies including Food Wise 2025 and beyond is critical and we have a significant role to play in the success of any future objectives within the sector. This scoping exercise must acknowledge our contribution and assess any weakness and present meaningful solutions to mitigate such threats.
